

## Additional 503 Chime Bell Church Road info

All the fireplaces in the main house are fueled by propane. The reason is because natural gas was not available at the time the house was built. A tank is buried in the field on the perimeter of the yard.

The fireplace in the great room is wood burning as is the one in the outdoor kitchen in pool house.

The heater for the hot tub and pool is heated by natural gas. One HAVC unit on the pool house, the grill, and backup generator for the pool house are all on natural gas.

A generator was put in after the last ice storm so the pool house will always have power.
